Education

University of Copenhagen — Copenhagen, Denmark
M.Sc. in Computer Science — 09/2023 – 12/2025

- **Thesis:** Not Alone, Just Apart: Designing PurrPost to Mitigate Pet-Owner Separation Anxiety
- **Courses:** Advanced Topics in Human-Centered Computing, Designing Collaborative Technologies, Critical Making, Machine Learning, Natural Language Processing

Tongji University — Shanghai, China
B.Sc. in Information Management and Information System — 09/2019 – 07/2023

- **Thesis:** Text Mining Based Video Conference User Demands Analysis

Research Experience

Not Alone, Just Apart: Designing PurrPost to Mitigate Pet-Owner Separation Anxiety — 01/2025 – 06/2025

- Designed and built an IoT prototype for remote pet-owner interaction using two-way audio, sensors, and AI-generated messages, using a research through design approach
- Conducted a one-month autoethnography through an in-home deployment, collecting daily diary entries, self-assessment questionnaires, photos, videos, and interaction logs
- Combined inductive thematic analysis with descriptive quantitative analysis, identifying temporal patterns in separation anxiety and showing how emotional connection was shaped by message timing, mutual engagement, privacy, and technical reliability
- Developed design guidelines for remote human-animal interaction, including changing needs over time, technical reliability, privacy in emotional expression, and animal welfare

Masking Ball: Rethinking Neurodiversity and Inclusion through Critical Design Artefacts — 02/2024 – 06/2024

- Applied critical making to design and build a soft, tangible artefact using crochet, e-textiles, LEDs, and a LilyPad board to make the invisible mental effort of masking physically perceptible
- Designed and facilitated a workshop with three participant pairs who used the interactive ball while performing simple tasks such as drawing to simulate the added effort of masking
- Collected and conducted inductive thematic analysis of semi-structured interview transcripts, recordings, and post-it notes to examine participants' understanding of masking and derive design implications for more inclusive environments

Turn-Taking Band: A Wearable Device Supporting Turn-Taking in Hybrid Settings — 02/2024 – 04/2024

- Conducted an exploratory study with eight participants in a hybrid collaboration setting, using collaborative games to identify turn-taking challenges.
- Collected and analyzed observation notes, video recordings, semi-structured interview transcripts, and survey responses, and identified turn-taking challenges around discussion entry, sound issues, attention, and subgroup dynamics
- Developed a paper prototype of a wearable turn-taking band illustrating proposed haptic and visual feedback mechanisms to support turn-taking in hybrid collaboration

Text Mining Based Video Conference User Demands Analysis 02/2023 – 06/2023

- Collected, cleaned, and analyzed 34,159 user reviews of Tencent Meeting from four app stores using TF-IDF, LDA topic modeling, SnowNLP sentiment analysis, and feature–emotion word pairs to identify major user concerns and compare sentiment across topics
- Found recurring concerns around microphone and camera control, privacy and information security, as well as functional and performance issues, and proposed product improvements based on the findings

Improvement and After-Training Database Establishment of Makiwara 03/2021 – 05/2022

- Interviewed 36 karate club members to understand training goals, feedback needs, and limits of existing training devices
- Designed and built a physical training prototype with a movable base, force sensors, and a microcontroller to capture punch force and timing, with a database for storing training data
- Analyzed user and expert feedback from pilot testing to propose design improvements for training devices that help practitioners track training progress over time

Teaching Experience

Teaching Assistant for Distributed Systems 08/2025 – 12/2025
IT University of Copenhagen

- Guided students through weekly exercises and live coding sessions, helping them understand technical concepts and complete programming assignments
- Participated in weekly teaching team meetings to coordinate teaching activities, share observations from grading, and adjust support strategies for students

Teaching Assistant for Advanced Topics in HCI 02/2025 – 04/2025
University of Copenhagen, Department of Computer Science

- Supported students during office hours by discussing literature reviews, experiment design, qualitative and quantitative data analysis, validity, and technical evaluation for HCI research projects
- Co-graded assignments and provided detailed feedback on concepts, argumentation, and written work together with another teaching assistant, ensuring consistency and fairness in assessment

Professional Experience

Frontend Developer Intern 09/2022 – 02/2023
Shanghai Bilibili Technology Ltd

- Developed internal frontend tools and user-facing messaging features, including a Chrome extension for inline log decoding and on-site messaging informed by user questionnaire findings
- Worked with product managers, testers, and developers in an agile team to track issues, iterate on features, and document changes

Skills

- **Qualitative Research:** Interview, ethnography, video analysis, workshop, thematic analysis
- **Quantitative Research:** Survey, descriptive statistics, statistical testing, correlation, regression
- **Design & Prototyping:** Research through design, critical design, Arduino, e-textiles
- **Programming:** Python, JavaScript, Java, C/C++, Go, MySQL
- **Languages:** English (Fluent), Danish (Intermediate), Chinese (Native)
